I am returning my copy. I can't believe the safety hazards this woman takes with LYE. It is a HIGHLY caustic material. (which Ms. Inlow does state) However, In her instructions she syas to pour your liquids into your lye... DO NOT DO THIS! Other than creating a volcano effect which could boil over and out of the container in which the mixing is taking place, due to Lye being considered a HAZMAT(Hazardous Material) it is actually illegal to do your mixing this way in some states.. PLEASE check with your local HAZMAT safety regulations before following her instructions.Misinformation: After studying soapmaking for over two years, I have learned that CASTILLE soap must have at least 50% olive oil in it, or the name must be changed. Ms. Inlow lists a Castille soap that is barely 1/3 olive oil.10 of 10 people found the following review helpful. Not alot of variationBy A CustomerI Bought this book hoping to learn some new recipes. Most of the recipes in this book are based on two main recipes. The only difference is the fragrances used. I was hoping to get alot more different base recipes. It's a small book for as much as it costs. I do like the fact that it is spiral bound, but I don't think it is worth the money I paid for it.18 of 21 people found the following review helpful. FabulousBy A CustomerThis is a great little book just for people like me - beginners! The recipes are simple and allow you to use measurements that will not intimidate you. (i.e. some recipes use measuring cups and teaspoons instead of relying on weight measures in

ounces/grams) Her basic recipes have got me excited about all of the different soaps that I can make!
