Robert Peczkowski : North American P-51D Mustang (Yellow Series) before purchasing it in order to gauge whether or not it would be worth my time, and all praised North American P-51D Mustang (Yellow Series):

Martinek I waited a long time to buy this because it is rather expensive, and I have several good references for this aircraft. I really wish I had not waited. I have an eight-tenths completed 1/32 scale model of the P-51D, and it is now SEVENTENTHS complete. I'll have to go back and fix a few things my other references didn't show including pictures I took of several aircraft on the ground. Unfortunately, there are some things I can't fix without complete disassembly. Not gonna happen. If you are a scale modeler building this aircraft, get this book. If you are someone interested in the technical aspects of the aircraft, get this book. It is worth every penny, plus shipping. This is thorough and complete, in some ways better than the maintenance and pilot's manuals (which I have) because it has clear color photographs instead of only line drawings. 6 of 6 people found the following review helpful. Another fine effort from Mushroom Model Publications By Jim Davis The iconic North American P-51D Mustang is the subject of the latest Mushroom Yellow Series monograph; this is number 6126. Despite the title coverage is also given to the identical except for the propeller P-51K. Like other Yellow Series books this is a 6-1/2"x9" square bound card cover. It runs to 152 pages. Unlike previous books this has a different paper stock - it appears to be of high quality but does not have the slick coating used previously. Also this title includes an unbound foldout sheet with 1/48th and 1/32nd scale line drawings. If buying second hand make sure this is included. The text is short but competent, only 32 pages with black and white photos and 1/72nd scale line drawings. It is marred by contradictions about the number of P-51Ds built both by North

American and Commonwealth Aircraft in Australia. The tables appear to be the more reliable. The next section is the meat of the book. 92 pages of close up color photos of preserved Mustangs in various stages of assembly supplemented with contemporary technical manual drawings and photos. These are really superb. The book winds up with 28 pages of superb color profiles. All operators get at least one so there are plenty of schemes for the modeller to choose from. Certain aircraft are produced in such quantities that there is always more to be discovered and yet another book is justified. The Mustang falls into that category and this book is proof of that. Even if you have an extensive library of Mustang books you won't be disappointed with this one. 0 of 0 people found the following review helpful. ... a Mustang fan or model builder this is a terrific resource. Lots of color photo's of both period ... By Customer If you are a Mustang fan or model builder this is a terrific resource. Lots of color photo's of both period and modern restored planes are featured, along with notes of what is different from the production models.

This detailed monograph covers the design and development of the P-51D Mustang family, the main wartime production variant of this classic fighter. The P-51D model introduced the definitive bubble canopy and heavier armament, and was the mount of many aces. After W.W.II the Mustang saw action again in Korea, and also served with many other air forces around the world. 'North American P-51D Mustang' contains comprehensive technical details of the American built P-51D, P-51K and the Australian CAC Mustangs. Numerous specially selected original NAA technical photographs Production and service photos A wide range of color profiles from 29 nations Rare color photographs from WWII.

A very extensive walk around section in color covers all aspects of the airframe, combining wartime photos and 31 excerpts from technical manuals and color photos of many restored Mustangs invaluable to modelers (cybermodeler) This book has it all. Cockpit illustrations and photos from every angle, full color detail images of the landing gear and wheel wells, excellent technical images of the engine showing all the plumbing. and full color profiles and color images.. a true modelers delight. This publication is highly recommended! (IPMS)
