Seth Friedman, Marc Kirschenbaum, Jason Ku, Daniel Robinson : Origami Planes (Origami Books) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Origami Planes (Origami Books):

1 of 1 people found the following review helpful. ... for my 10 year old nephew who is extremely good at Origami By Renner I bought this for my 10 year old nephew who is extremely good at Origami. Although it is complicated and not for a beginner, he was able to make several of the planes quickly yet it challenged him just enough. Very well put together with a large amount of paper. 1 of 2 people found the following review helpful. Not for beginners By James Not for beginners. My 8 year old son got this as a gift and he was not able to build 1 of the planes. I have tried myself and find it difficult at best making them. It was much easier teaching him how to build paper cranes than trying to teach him these. Plus he thought he would be able to fly the planes like normal paper planes but they don't work for that. Good if you want decorations and have good skills other than that I don't recommend this product because of

complexity. 0 of 1 people found the following review helpful. Origami Experience Needed For This Book By Elizabeth Gamblin My 8-year-old son bought this book with his own money thinking it would be great! He was so very disappointed. It does not say what the age or the experience level is for this book and, at first glance, looked to be fairly doable with an adult's help. After spending the last 2 and a half hours trying to make two different planes from this book myself, I have given up. This book may be good for someone who has origami experience but for the beginner, it is lousy. Not only is my son disappointed in this book, but I am as well. This is not worth the money unless you have some origami experience.

Your spirits will soar as you fold up these ten origami models! An exciting challenge, this kit will appeal to aviation enthusiasts and origami artists alike. Watch your very own hangar of model airplanes unfold before your eyes as you follow the step-by-step directions and detailed diagrams in the 80-page instruction book. Specially designed paper makes these models better than any other paper airplane. A fun and interactive way to enhance aircraft recognition and learn aviation history, this kit will leave you flying high!

About the Author Seth Friedman is an internationally known origami artist from Brooklyn, New York. He has shown his original origami sculptures, and presented on the topic of origami in the United States, Canada, France and Japan. Best known for his sculptures of birds, he also makes every living creature of interest the subject of his folding. Marc Kirschenbaum, a leading American origami artist, is known for his wide range of subject matter and for utilizing a variety of folding mediums--even toilet paper. His works have been shown in many museums and shows around the world, including the American Museum of Natural History, The Smithsonian Institution, Mingei International Museum, and Hangar-7. Several of his works have been published in books and periodicals. He lives in Manhattan. Jason Ku has been folding since the age of five. He began designing original models in high school. In 2005, Ku was invited as a Yoshino Fund special guest to teach and exhibit at the Origami Tanteidan convention (the annual meeting of the Japanese Origami Academic Society) in Tokyo, Japan. Since then, he has received two degrees in mechanical engineering from MIT while acting as the president of MIT's origami club, OrigMIT. He lives in Boston, MA. Daniel Robinson is an industrial designer in New Jersey. He has been doing origami for over 25 years. His work has been published and displayed in museums all over the world. Robinson believes that the product of origami is secondary to the process; it is the transformation of a simple sheet of paper into something evocative and stimulating that conveys the real magic of origami.
