Mark Hiner : Paper Engineering for Pop-Up Books and Cards before purchasing it in order to gauge whether or not it would be worth my time, and all praised Paper Engineering for Pop-Up Books and Cards:

2 of 2 people found the following review helpful. Five Stars By Donna Lavdis This is really a well thought out book. I am sure an artist and an engineer collaborated on it. 1 of 1 people found the following review helpful. Very good. By 2thdoc A good coverage of basics. Could have gone further on the subject. 0 of 0 people found the following review helpful. Four Stars By Joyce Douglas I have been getting into the paper manipulation and this has helped.

This book illustrates in dynamic form ten basic mechanisms which are used in making pop-up books. It offers many imaginative possibilities. Each of the ten basic mechanisms is illustrated by a working model which you can cut out and make. When finished, it glues back into the book on a special tab and folds away to make a kind of 3-dimensional dictionary or encyclopedia. For each working model there is also a page called 'technical considerations' which points out important features of the mechanism and suggests how it might be used to create original designs of your own.
