This book is nice, but unfortunately it is totally software specific - written only for people who own Photoshop Elements - an expensive software, not owned by many quilters. Essentially the book is about how to use Photoshop Elements for quilt design. If you do not own the software there is little you can do with the book. I did not see a warning about this fact anywhere. I think this should have been stated clearly at least on the cover. So beware!3 of 5 people found the following review helpful. Piecing With Pixels: Unique Quilts from Your Own ImagesBy L. Andronikashvilithis book is more than i expected. it is easy to follow and has

very detail explanation of every step. i highly recommend it.3 of 3 people found the following review helpful.
WOWBy LHI have three passions: taking pictures, computers, and quilting. This book combines all of these and gives techniques for creating some of the most unique quilts I have ever seen. Photos of textures can now be transformed on the computer so you can create your own "stash" by using Photoshop Elements. The cookie cutter option with over 500 choices is amazing! Drunkards Path becomes an easy pattern with the computer! And using your own photographs in the quilt has never been easier. After reading the book, I would love to take a class from the two authors and pick their brains even more. They have written quite an amazing book!

Who ever thought your camera and computer could be your most valuable quilting tools? Going far beyond the concept of simply transferring photos to fabric, the authors show you how to transform your favorite photos into dazzling quilts. Learn how to 'piece' traditional blocks and original 'appliqu' designs using Adobe Photoshop Elements software to create, modify, embellish, and print the designs directly onto fabric. The intriguing digital projects include easy-to-follow step-by-step instructions. It is fun and efficient to copy, resize, and reprint your blocks to create larger or smaller quilts, table runners, pillows, or note cards. You'll love using common images in uncommon ways, creating fabrics for your own wonderfully unique quilts. Collectively, this talented California team has been quilting for nearly 50 years. Both are enthusiastic teachers. Gudny is a PC expert who also teaches painting on fabric. Sandra is a Macintosh expert who has been teaching how to print images onto fabric and incorporate them into quilts. Together they teach workshops on their digital-quilting technique.
