**Ken Evans, David L Trudgill, John M Webster : Plant Parasitic Nematodes in Temperate Agriculture** before purchasing it in order to gage whether or not it would be worth my time, and all praised Plant Parasitic Nematodes in Temperate Agriculture:

0 of 0 people found the following review helpful. Reasons for the low rating By Maria Teresa I was not warned about the various permanent stamps, as the book belonged to a library. As the book was to give to another person, it was not possible to do it.

Nematodes are major pests of a number of temperate crops and can cause significant economic losses to farmers. This book provides a comprehensive account of such parasites, with chapters focusing on nematode pests of the main crops of importance in agriculture, horticulture and forestry. Written by leading authorities from the USA, UK, Canada, France, Netherlands, Australia, Bolivia and New Zealand, this book is a definitive reference work for plant pathologists in general, and nematologists in particular.

About the Author K. Evans, AFRC Institute of Arable Crops Research, Rothamsted Experimental Station. D. L. Trudgill, Scottish Crop Research Institute. J. M. Webster, Center for Pest Management, Simon Fraser University.
